AMAFERM®

WHAT IS AMAFERM®?

Amaferm is a natural feed additive that acts as a prebiotic increasing digestibility to maximize the energy value of feed.

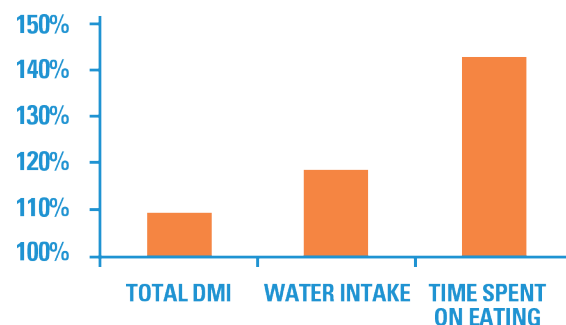

WITH AMAFERM YOU WILL SEE:

Increases in water & dry matter intake for more gain.

Improvements in conception rates and maintained pregnancy.

Improvements in pasture utilization and digestibility.

Reduction in heat stress.

HEAT STRESS MEANS LESS PERFORMANCE

While most don't think of heat stress until it is hot outside, it is important to know that cattle can become heat stressed at temperatures of 70°F and above.

Green grass alone does not provide the supplementation needed to overcome the reduced performance.

WHEN SHOULD I USE VITAFERM® HEAT?

- When temperatures reach 70°F or above.
- If you have fescue.
- If you are looking for natural insect control.

HOW VITAFERM® HEAT CAN HELP

- A vitamin and mineral supplement used to reduce heat stress during temperatures of 70 degrees and above, or anytime cattle are grazing fescue.
- Contains Amaferm® and Capsaicin, which is research proven to lower body temperature and can help improve conception rates and maintain pregnancy.
- Also includes garlic, a natural insect repellent.

**Keeps cows grazing
and out of the ponds.**
